

Baking Soda (Sodium Bicarbonate) 5kg

Baking soda is not only an excellent leavening agent for all types of baked goods, but it also serves as an eco-friendly alternative to conventional cleaning products in your household. There are numerous ways to use baking soda around the house, and here are a few we'd like to share: One effect stems from the reaction of baking soda with acids, which is why it's often combined with vinegar in household applications. This releases the white powder's potent cleaning properties. It can also be used for water softening and has antibacterial effects. The basic pH level creates an unfavorable environment for bacteria to thrive. Moreover, baking soda serves as a gentle abrasive to remove stubborn residues. However, avoid using it on aluminum items and surfaces, as it may cause unsightly discoloration.
